THE IMPACT OF CONSUMERISM ON OUR ENVIRONMENT

THE MAP

Our best map was built on cardboard from an Amazon expedition and focused on the economic aspects of the 4 constituent nations of this Erasmus work group.

The surface of the 4 countries is covered with some of the products that characterize the economy.

3 magnets and a pin received as a gift from our foreign friends embellish the work.

BULGARIA 

Salt, kaolin, sand and clay are some raw materials present in the country.

High quality organic agricultural products are grown for food industries, including foreign ones, for preservation (jams ...) or for cosmetics (essential oils). Even wine is exported.

The tourism sector, in a country with a varied landscape (countryside, mountains, important thermal areas, sea) contributes to the country's GDP.

The wood and furniture sector is also important, given the availability of raw materials.

The high-tech industry is very developed

CZECH REPUBLIC

It has good mineral resources: carbon, uranium, lead, silver.

Forestry, intensive farming and aquaculture are important resources.

The automotive industry (Skoda) is well established and the footwear industry (Bata) is equally well known.

Famous everywhere is the production of Bohemian crystals.

Tourism is booming, with the capital Prague and the beautiful spas.

ROMANIA

Oil, natural gas, salt, gold, silver, metals, ornamental rocks, coal are some of the most important raw materials in Romania.

In general, the territory of the country is favorable to the cultivation of cereals and organic products, and could give discrete wealth if managed in a more modern way

The wood and furniture sector is also important, given the availability of raw materials.

The Romanian textile-clothing and leather goods industry has a long tradition and, despite the decline in production recorded in recent years, remains one of the country's most important industrial sectors
